Connecting to the Mobile E-Catalog

An RDP client is required for mobile users using either Apple or Android. Microsoft Remote Desktop is the recommended RDP - it is a free client application that is available for most mobile devices. Apple and Linux use should use the Web Version of the E-Catalog.

Microsoft Remote Desktop Installation and Setup

Install the application on the mobile device and setup the connection as shown in the following images. Depending on the device and operating system, the setup page may have a slightly different appearance.

Begin by installing Microsoft Remote Desktop from the App Store

Once the download is complete, launch the app and select the + button on top right of the toolbar to configure a new Remote Desktop
